

**Two excellent doors  
 provide reliable and  
 secure performance.**

Re-Coil-Away 70 Exterior Door.

The MCI Center, home of the Washington Wizards, has two important goals. To provide security to their famous team and easy access to large visitors such as circus elephants or semi trucks that pass through their doors on a daily basis.

It is crucial that the doors provide reliable and fast performance. The stadium was originally constructed with rolling steel doors. Unfortunately, these doors are slow and prone to be impacted by vehicles, especially in high traffic locations such as the loading dock. As the maintenance cost of the rolling steel doors grew, so did the need to find an alternative solution. The engineers at the MCI Center began looking into the Rapid Roll® industry for help

Albany Door Systems presented the MCI Center with 2 magnificent solutions. For their exterior opening, we choose the Re-Coil-Away™ door because of its rubber curtain and tough design. It provides the dependability needed for the day-to-day operations and the performance expected from the world's toughest roll up door. And for their interior opening, we provided specs on our Rapid Roll 670, this door has speeds of up to 100" per second backed by a 1.5 hp motor.

The doors have been installed now for almost 3 years and are performing at the level the MCI Center was promised. Albany Door Systems custom builds doors to meet every need and application. We help customers reduce maintenance expenses and save on energy conservation by making sure we match the perfect door to your need.
