(100+) RCA 60, 65

(45) 12'W x 15'H

(30) 22'W x 16'H

Various others as large as 30' wide

Albany International and M&I Door Systems is the supplier of choice for the majority of door needs within the RTD. Since 1994, we have supplied over 100 doors for facilities throughout Colorado, in applications ranging from wash bays, maintenance bays, bus parking garages, receiving and warehouse doors.

The RTD facilities were originally equipped with steel telescoping doors to handle high cycle and high wind load requirements. After little use, it became apparent the telescoping doors were high maintenance and extremely expensive to repair. The other main problem they were experiencing was regular impact by city buses and replacement curtains for the telescoping doors were also extremely expensive. After the RTD tried our Re-Coil-Away doors on two openings, they witnessed how they took every impact with no damage to the curtain and went back into service with little time and effort. Since the initial trial, the doors have proven to be virtually maintenance free and have led to the replacement of most older doors within the RTD's facilities.

M&I Door Systems built their reputation with the world's toughest roll-up door proven in the harshest, abusive and high traffic environments. All doors are custom built, withstand wind speeds of 88mph and are available up to 50 feet wide.
